

Dashboards of Supermarket Dataset

This dashboard provides a comprehensive view of the supermarket's performance across branches, product lines, and time periods. It highlights total sales, profit contributions, and customer preferences, allowing for easy comparison between cities and product categories. With visualizations like bar charts, donut charts, and time-based trends, it helps identify peak revenue periods, preferred payment methods, and high-performing products. The dashboard supports informed decision-making by combining key business metrics into an interactive, easy-to-understand format.

Dashboard-1:

A focused view on how each branch and product line contributes to total sales and profit, along with payment and customer patterns.

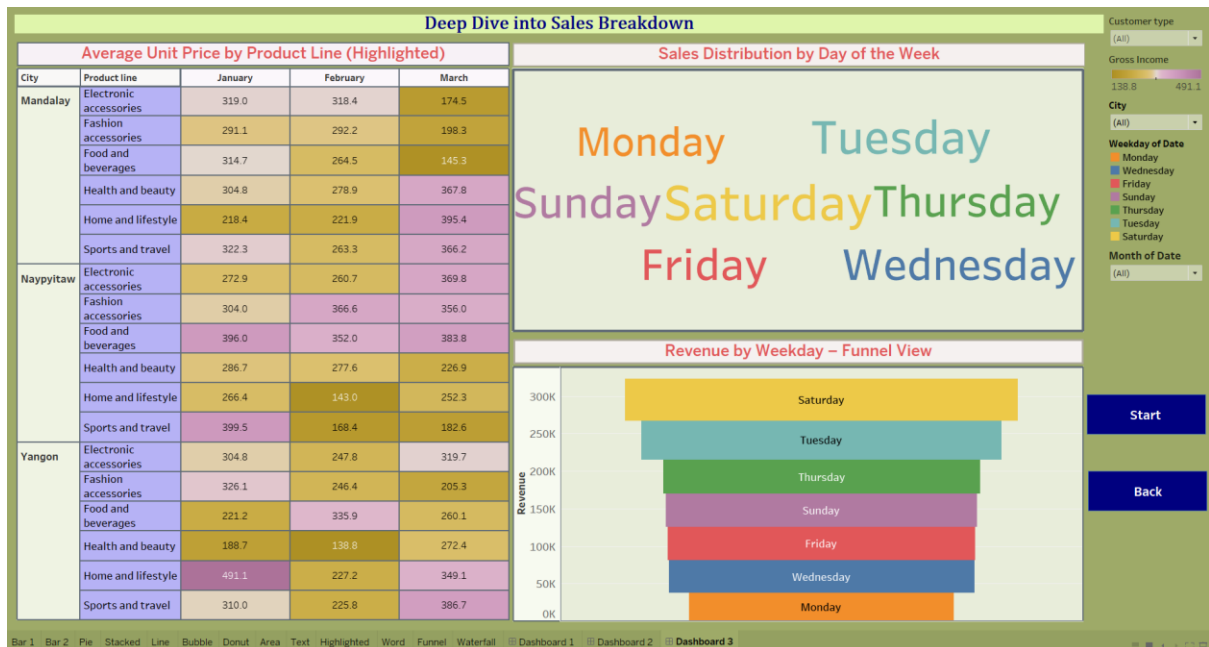

Dashboard 2:

Tracks customer satisfaction and revenue trends across days and hours to reveal performance momentum over time.

Dashboard 3:

Breaks down product line earnings, pricing patterns, and weekday sales behaviour for a sharper business view.
